DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 9-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over 939 in view of US 7002642 B2, US 6816207 B2, US 6437915 B1, US 6246451 B1, US 6055013 A, US 5875055 A and US 5493427 A.

939 teaches a transflective panel comprising a reflective region and a transmissive region, the reflective region and the transmissive region being provided for each pixel [5,6], a diffuser process being performed on in a portion corresponding to the reflective region [23], a color filter having a colored layer formed in a portion corresponding to both the transmissive region and the reflective region [29] and a transparent layer formed on a portion corresponding to the reflective region, wherein the diffusion process is performed on in the portion corresponding to the reflective region, by using at least part of the transparent layer as a diffuser processed layer [23].

Per claims 9-12, 939 lack the parallax barrier and the switching cell. However, it was well known to place switching cells and parallax barriers between the display and the viewer to create a display capable of displaying either three-dimensional images or two-dimensional

images. US 7002642 B2, US 6816207 B2, US 6437915 B1, US 6246451 B1, US 6055013 A, US 5875055 A and US 5493427 A evidence that it was well known.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Dudek whose telephone number is 571-272-2290. The examiner can normally be reached on 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Nelms can be reached on 571-272-1787. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
